Flogo: learn and present

For Dhirendra Solanki, from iSteer Technologies

You told us you are new to Flogo and ready to upskill. As the next step for the TIBCO Senior Developer role, please learn TIBCO Flogo from TIBCO's public documentation (docs.tibco.com) and any public material, and present what you have learned as slides. We are interested in how well you learn and explain a new platform, in your own words. No TIBCO software or licence is needed; the public documentation is enough.

What to cover

#	Topic	What to cover
1	What Flogo is	Where it fits next to BW6 and BWCE: engine, footprint, typical use cases.
2	App model	Triggers, handlers, flows, activities, the mapper and functions, app properties, error handling.
3	Connectors and APIs	REST and OpenAPI, messaging (EMS, Kafka); how a connection is configured.
4	AI and MCP	The Flogo MCP Server trigger and MCP client activity; why expose flows as MCP tools.
5	Deployment	Building the app, containers and Kubernetes, health checks.
6	Observability	App metrics, traces and logs.
7	BW to Flogo	One BW process you built (anonymised): how it would look in Flogo, activity by activity, mapping, error handling, what is easier or harder.
8	What you learned	The sources you used (a short list), what surprised you, what you would learn next.

Your slides

- Send your slides to Thabitha by Friday 6 November, 6 pm; earlier is welcome.
- Write them so they can be read without you presenting: your own words, diagrams welcome.
- On Friday 20 November, in the one-hour session for your Kong demo, we will ask you a few questions on your slides.
- No customer data: anonymise the BW process you use. You may use AI tools to learn, but please answer questions without notes.

Questions: Thabitha Konda (HR).
